### HOW THE UNITED STATES CAN MEET ITS PRESENT AND FUTURE PULP- WOOD REQUIREMENTS.<sup>1</sup>

By EARLE H. CLAPP, *Assistant Forester*, and CHARLES W. BOYCE, *Forest Examiner, Forest Service.*

#### CONTENTS.

Page.		Page.
2	Reasons for inquiry: Its scope.....	
3	Why we should seek independence in pulp-wood supplies.....	
5	Current American requirements: How they are supplied.....	
5	Current requirements and their importance.....	
7	Development of the American industry—	
7	Prior to the use of wood.....	
8	The wood-pulp period.....	
11	How present and past requirements have been met.....	
14	Pulp wood.....	
15	Wood-pulp grades.....	
19	Paper grades.....	
23	Countries.....	
25	Species and groups of species.....	
27	Probable future requirements.....	
27	Probable future paper requirements.....	
31	Raw pulp materials other than wood.....	
32	Probable future pulp-wood requirements.....	
33	How we can supply present and future pulp-wood requirements.....	
33	Present timber resources, drain, and replacement.....	
35	Present and probable future area of forest land.....	
36	How we can supply regional pulp-wood requirements.....	
36	Middle Atlantic States.....	
41	New England States.....	
44	Lake States.....	
47	Pacific Coast States.....	
53	Alaska.....	
55	Southern States.....	
57	Rocky Mountain States.....	
59	Central States.....	
	How can we supply present and future pulp-wood requirements—Continued.	
	National timber growth under forest management.....	60
	Possible growth under crude forest management.....	60
	Possible growth under intensive forest management.....	61
	Essential supplementary measures for meeting requirements.....	62
	Utilization of logging and sawmill waste and integration of timber-using industries.....	62
	Increased use of waste paper.....	63
	Reduction of waste in pulp and paper manufacture.....	63
	Modified pulping processes and wider use of species.....	64
	Conclusion.....	65
	Outstanding findings.....	65
	The problem.....	66
	The solution.....	67
	Essential supplementary measures.....	67
	Growing pulp wood the fundamental solution.....	67
	The solution of the immediate spruce-fir-hemlock problem.....	68
	The solution of the future spruce-fir-hemlock problem.....	69
	The solution of the pine and hardwood problems.....	69
	The share of the public and of the industry in the solution.....	69
	Appendix.....	71

<sup>1</sup> Acknowledgment is made to J. C. Dort for data on the water-power resources of Alaska; to John D. Rue for data on a modified pulping process; to William N. Sparhawk for assistance in the preparation of the regional timber-stand tables; to Joseph Kittredge, jr., for the tables showing timber growth; to Robert V. Reynolds for the table showing the drain on American forests; to the Bureau of the Census for lumber cut, pulp-wood consumption, and wood-pulp production statistics for 1922; and to William B. Greeley and Herbert A. Smith for a critical review of the manuscript.
