Knjiga *Park-šume grada Zagreba* nastala je na poticaj Akademije šumarskih znanosti i Gradskega uređa za poljoprivredu i šumarstvo Grada Zagreba te uz svesrdnu pomoć Uprave šuma podružnice Zagreb, Javnoga poduzeća Hrvatske šume d.o.o. Zagreb. U njoj su s gledišta šumarske znanosti i estetike šuma obrađene povijesne okolnosti postanka i razvoja zagrebačkih park-šuma, njihov biljni svijet te stanišna, morfološka i šumskouzgojna obilježja. Poseban je naglasak dan na općekorisne funkcije park-šuma (ekološke i socijalne) te na njegu i pomlađivanje bez kojih nema njihove stabilnosti i vitalnosti, a time i potrajnosti.

Pod park-šumama grada Zagreba razumijevaju se sve šumske sastojine koje su uklopljene u urbano tkivo i čija je primarna zadaća trajno i optimalno pružati građanima općekorisne dobrobiti. Želimo istaknuti njihovo značenje i potrebu za aktivnom zaštitom, posebice danas kada su ugrožene građevinskim zahvatima u njihovoj bližoj okolini, onečišćenjem zraka, vode i tla te nerazumijevanjem svih koji misle kako će im pomoći pasivnom zaštitom.

Knjiga *Park-šume grada Zagreba* namijenjena je zaljubljenicima u prirodu i šume. Korisno će poslužiti šumarskim stručnjacima, studentima šumarstva, urbanoga šumarstva, biologije, agronomije, arhitekture, učenicima prirodoslovnih strukovnih škola te svima koji trebaju bolje poznavati šume urbanih sredina. U njoj će doznati kako u svakoj šumi, pa tako i park-šumi, treba primjereno gospodariti kao dobar gospodar, prema načelima zagrebačke škole uzgajanja šuma, kako bi ona mogla optimalno i trajno pružati dobrobiti koje se od nje očekuju.

Knjiga je priređena na hrvatskom i engleskom jeziku te upotpunjena brojnim fotografijama. Uvjereni smo da će tako podaci o ovim prirodnim ljepotama grada Zagreba i Hrvatske biti na najbolji način dostupni javnosti.

Na kraju najtoplije zahvaljujemo svima koji su uložili trud i koji su zaslužni da *Park-šume grada Zagreba* ugledaju svjetlo dana.

## FOREWORD

The book *Park Forests of the City of Zagreb* was born out of the initiative of the Academy of Forestry Sciences and the City Office for Agriculture and Forestry of the City of Zagreb, with the wholehearted support of the Forest Administration of Zagreb and the company Hrvatske Šume, Zagreb. The book explores the historical circumstances surrounding the origin and development of Zagreb's park forests from the standpoint of forestry. Their plant world, as well as their site, morphological and silvicultural characteristics, is analysed from the aspect of forest science and aesthetics. Special focus is placed on the non-market (ecological and social) functions of a park forest, and on tending and regeneration as a guarantee of stability, vitality and sustainability.

Park forests in Zagreb include all forest stands that are part of the urban tissue. Their primary role is to provide citizens with general benefits of a permanent nature and to an optimal degree. Our intention is to stress their importance and the need for their active protection, particularly in present times when they are endangered by construction activities taking place in their closest vicinity, by air, water and soil pollution, and by a lack of understanding on the part of those who wrongly believe that passive protection is sufficient for their preservation.

The book *Park Forests of the City of Zagreb* is intended for lovers of nature and forests. We hope that it will be used by forestry professionals, students of forestry, urban forestry, biology, agronomy, architecture, pupils in nature-based vocational schools, and by people who need an in-depth knowledge of forests in urban environments. Readers will learn that every forest, including a park forest, should be properly managed, in a responsible manner, according to the principles of the Zagreb School of Silviculture. Only if this is done will a forest provide all the expected benefits in an optimal and sustainable way.

The book is written in Croatian and English and contains a large number of photographs. We are confident that the book presents the natural wealth of the City of Zagreb and Croatia in the best possible manner.

Finally, we would like to extend our warmest thanks to all those whose unreserved effort has made it possible for Park Forests of the City of Zagreb to see the light of day.
