

2426  
YALE UNIVERSITY : SCHOOL OF FORESTRY

Bulletin No. 62

AMOUNT AND CHEMICAL COMPOSITION  
OF THE  
ORGANIC MATTER CONTRIBUTED BY  
OVERSTORY AND UNDERSTORY  
VEGETATION TO FOREST SOIL

BY

DAVID ROBERT MAIN SCOTT

Instructor of Silviculture, Yale University and  
Forester, Division of Research, Ontario  
Department of Lands and Forests.

New Haven : Yale University

1955 ✓

	<i>Page</i>
INTRODUCTION	1
REVIEW OF LITERATURE	3
Variation in chemical composition of plants	3
Amount of organic debris in forests	5
Annual litter fall	6
Influence of stand age on litter production	8
Influence of site quality on litter production	9
Periodicity of litter fall	11
Accumulation of litter on the forest floor	11
Comparison of litter and wood production	13
Amount of litter contributed by subordinate vegetation in forests	13
Chemical composition of the foliage of forest vegetation	18
PROCEDURE	20
Location and general description of the experimental area	20
Design of the experiment	20
Detailed description of experimental areas and plots	21
Soils, location, elevation, and aspect of blocks	21
Weather conditions during the growing seasons of 1947, 1948 and 1949	22
Checklist of plant species and description of stands on individual plots	23
Method of collecting material	28
Understory	28
Overstory	29
Chemical analysis of material	29
Hydrogen ion concentration	30
Nitrogen	30
Other elements	30
RESULTS AND DISCUSSION	32
Total weight of forest litter	32
Potassium	35
Calcium	36
Magnesium	38
Phosphorus	39
Manganese	41
Iron	42
Aluminum	43
Zinc	44
Sodium	45
Copper	45
Boron	46
Nitrogen	47
Hydrogen ion concentration	49
